Beyond Current - *Akeela*

All members in our group are first year IT students, meaning that our skills aren't as refined as the industry standard. However, we each have our strengths and weaknesses that balance out our capabilities in the team. A number of our team members, - Jessani, Jade, Akeela, Yumi and Anisah - are strong in design and ux related areas and weaker at web programming with the exception of Jade and Jessani who are comfortable with coding in HTML. Dylan's strength lies in Github, web programming and networking and his area to develop is design. Therefore pairing him with a more design oriented team member with weaker programming skills ensure that both can support each other and develop their skills. We have 3 strong web programmers and 3 strong designers, so pairing up will work well. We took all of this into consideration when assigning the roles, and ensured that everyone gets a chance to develop their skills in an area they feel needs work on. Since our project is a website, it's a perfect opportunity to develop our HTML coding and UX design skills to ensure our website is as smooth running and simple to use as possible.
